Quotes 1

Forecasting

Value chain

Chapter 1

A global system of satellites provides high-resolution observations of the ocean's surface, while a network of in situ platforms, such as research vessels, moorings,

and automated underwater vehicles like Argo floats, provides measurements from the surface down to the deep ocean.

This website is produced by OceanPrediction DCC to make the state of ocean prediction, as documented by the global science community in the OPSR, accessible to the audiences who need to understand it.

Chapter 6

Whose interests?

Fisheries

Millions of people live on the produce of the oceans – and millions more earn a living by catching the fish.

Leisure

Tourism, sport, exploring – the interests of stable oceans support entire industries

Yachting

Yacht building and design are high value industries which can't prosper without ocean forecasting.
